Software Engineer | Front End

SUMMARY

Software engineer with six years building production web applications. Front-end depth in React, Angular, and Vue, extending into Java and Spring Boot services. Led front-end delivery on two platform migrations, built component libraries adopted across multiple product teams, and cut load times on high-traffic systems. Based in Georgia.

TECHNICAL SKILLS

Front End: React 19, Angular, AngularJS, Vue.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, single-page applications, component libraries, Storybook, ECharts, responsive design, cross-browser support, WCAG 2.2 accessibility

Back End and Data: Java, Spring Boot, REST APIs, MongoDB, Cassandra, SQL

Tooling and Workflow: Git, pull requests, code review, Agile, Scrum

Testing: Unit testing (Vitest), end-to-end testing (Cypress), load testing (Apache JMeter), security testing (OWASP ZAP), performance profiling, AI-assisted development with Cursor and Claude

PROFESSIONAL EXPERIENCE

Associate Software Engineer

T-Mobile | Atlanta, GA (Hybrid) | January 2026 to Present

- Rebuilt a legacy AngularJS provisioning and order management tool in React 19, redesigning the UI architecture against a data layer backed by Cassandra.
- Added REST endpoints to the Java and Spring Boot service layer to support the new React front end.
- Cut ECharts dashboard load times by more than 10x by building a MongoDB metadata layer in Java and Spring Boot.
- Built circuit-breaker failover to Cassandra when metadata store errors crossed a threshold, keeping the system available during partial outages.
- Used Cursor and Claude daily in production work across React components and Spring Boot services.

Junior Front-End Developer

Brad's Deals | Chicago, IL (Remote) | January 2023 to February 2025

- Delivered front-end work on the migration of a high-traffic e-commerce platform from Ruby on Rails to Vue 3, cutting load times roughly 30% while holding up under 200% traffic spikes during the holiday season.
- Built and documented a responsive Vue 3 component library in Storybook, partnering with product and design on consistent UX and mobile support, which shortened development cycles.
- Wrote Vitest unit tests and Cypress end-to-end coverage so the migration off the Rails monolith could ship incrementally rather than as a single cutover.
- Refactored and modularized legacy code to reduce technical debt and ongoing support load.

Technical Analyst

Fiserv | Alpharetta, GA (Hybrid) | June 2021 to December 2022

- Built an Angular component library adopted by several product teams, establishing shared UI standards across a financial services organization.
- Ran accessibility testing on UI components and full applications to meet WCAG 2.2, improving usability for people using assistive technologies.

Junior CRM Developer

Tensar | Alpharetta, GA (Hybrid) | August 2019 to June 2021

- Migrated on-premises Microsoft Dynamics to cloud-hosted Dynamics 365, improving application responsiveness with minimal disruption to business users.
- Built interactive JavaScript dashboards for CRM data.
- Ran penetration and load testing on a React web and mobile application using OWASP ZAP and Apache JMeter, cutting load times roughly 50%.

EDUCATION

B.A. Computer Science and B.A. Finance, University of North Georgia, Dahlonega, GA
